

# Selby District Council SFRA

## Settlement Sustainability Hierarchy:

## Primary Village

## Brayton

## Preliminary Core Strategy Assessment

Excludes residential and employment estates on the edge of Selby which are physically separate from Brayton village and which are considered as part of the Selby urban area.

### Development Strategy

#### Regional Spatial Strategy (RSS) - published May 2008

The RSS seeks to concentrate future growth in Selby, which is identified as a Principle Town. LDF's to identify Local Service Centres where local services should be retained and improved, local housing needs for both market and affordable housing should be met and economic diversification encouraged.

#### Local Development Framework

#### Core Strategy Further Options Report, November 2008

Brayton is identified as one of 20 Primary Villages with scope for some limited residential development to help maintain the rural service network. This may include continued redevelopment of existing sites and new allocations.

#### Local Plan (February 2005)

Considered to have an excellent service base, and good access to employment opportunities by public and private transport. No sites allocated for residential development. Proposals for redevelopment of PDL and residential conversions supported in principle.

#### Notes

In accordance with PPS 25 Functional Floodplain (Flood Zone 3b) is mapped to highlight areas where only water-compatible development and land-use is recommended. PPS25 defines Flood Zone 3b as the flood with an annual probability of 1 in 20 (5% AEP) or greater. As the 5% flood outline has not yet been delineated for all the main rivers within the District boundary, the following conservative approach to delineating the functional floodplain has been agreed with the Environment Agency, until more detailed information is available.

- Outside development limits in undefended areas Flood Zone 3 is represented as Flood Zone 3b (Functional Floodplain).

- Inside development limits and in defended areas, Flood Zone 3 is represented as Flood Zone 3a (High Risk), since existing built-up/defended areas are unable to function as 'natural floodplain'.

It should be noted that the 'assumed' extent of functional floodplain is insufficient for development control purposes. Further detailed investigation of prospective development sites within Flood Zone 3 will be required to establish the precise extent of functional floodplain (Flood Zone 3b), and the area defended to a standard of 1 in 20 annual probability (Flood Zone 3a). This work may be incorporated in site-specific FRA's.

### Flood Risk

The vast majority of the settlement of Brayton, falls within Flood Zone 1 (Low Risk), with only a small proportion (14.5% of the total area) to the north east falling within Flood Zone 2 of Selby Dam. The land to the north east of the settlement is predominantly Flood Zone 2. There are no other sources of flooding which affect the settlement of Brayton.
