## Analysis of Travel to Work Patterns – Selby District

### Introduction

Since the 2001 Census Journey to Work statistics became available in 2004, it has been realised that Selby was unique amongst the Yorkshire and Humber authorities in that almost half (49%) of its population work outside the District. This is 10% higher than the second highest authority (Rotherham). Tables A and B indicate that the number travelling into the District was only 60% of the number travelling out of the District (7449 fewer). Selby's location as a rural authority with a number of larger towns and cities within easy travelling distance around its periphery explain the high out-commuting but work undertaken by the York and North Yorkshire Partnership Trust<sup>1</sup> also shows that Selby District had the longest average journey to work of any District in the York and North Yorkshire sub-region; and the highest proportion of car based commuters. These movement patterns are considered to be relatively unsustainable and a matter which should be addressed through the Core Strategy in order to try to reduce the phenomenon if possible.

The outward commuting patterns provide an indicator of the relative sustainability of areas to receive new housing development - areas with the highest levels of out-commuting are the least sustainable. Secondly, inward commuting patterns aid consideration of the location of new economic development. Areas whose workers have the most localised patterns of journey to work are the most sustainable from the travel to work aspect.

In order to refine the analysis for the purposes of the Core Strategy, the District was divided into 5 geographical areas (See Map), and the patterns of journey to work as recorded in the 2001 Census were analysed for each. The five areas are:

- Area 1 Tadcaster and surrounding villages
- Area 2 Sherburn-in-Elmet and surrounding villages
- Area 3 North-east Selby villages
- Area 4 Selby and surrounding villages
- Area 5 Southern Selby villages

Analysis of Travel to Work Patterns*

**Travel to work areas**

\*\*\*\*\*

\*\*\*\*\*

## **Analysis Results**

### ***Out Commuting***

Tables 1-5 show the outward commuting patterns for the 5 areas. The main features are:

- In Areas 1,2,3 and 5 between 55 and 59% of residents work outside the District of Selby.
- Area 4 is the most self-contained with only 37.8% of workers travelling outside the District.
- Leeds is the most popular work destination from Areas 1 and 2. (57% and 51% respectively of those travelling outside the District)
- York dominates Area 3 (57.3%) and Wakefield (48.5%) is the most prominent destination from Area 5.
- Area 4 is divided more equally between Leeds and York. (26% and 32% respectively of those travelling outside the District)

### **Conclusion on Outward Commuting**

Commuting patterns shown by the Census have tended to reinforce previous subjective assessments. However, in the event, the distinctiveness of Area 4, 'Selby and Adjoining Villages' area is particularly striking. The Selby area is clearly shown to be the most self-sufficient in terms of homes and jobs - a fact, which reinforces the policies of the Draft Regional Spatial Strategy, in terms of focussing new development in that area.

Area 4 Selby is the only one of the 5 areas that could be described as a sustainable location for new housing development in relation to the journey to work factor, as it has a majority of residents living and working within the same area. The other locations do not have a majority of residents even working within the District. Provided the local economy grows in parallel with (and preferably in advance of) new housing growth, the area will provide the most appropriate location for new housing development.

### ***Inward Commuting***

Tables 6-10 show the inward commuting patterns for the Core Strategy areas. The main features are:

- In Areas 1 and 2, a small majority of those working in those areas live within Selby District. The percentages are 57 and 60% respectively.
- Employment in Areas 3 and 4 utilises a higher percentages of workers living in Selby District - 68 and 74% respectively\*

\*\*\*\*\*

\*\*\*\*\*

*\*It should be noted that these high levels of local participation occur in spite of the fact that in 2001 there were still substantial in-commuting flows from Barnsley, Doncaster and Wakefield Districts to the Selby Mine complex. Those particular movements no longer exist which means that the areas are likely to show higher local worker percentages even though the overall number of jobs may have been reduced.*

- Area 5 is particularly weak in terms of local worker utilisation with only 39.5% of workers living within Selby District.

### **Conclusion on Inward Commuting**

The inward commuting patterns are a useful indicator when considering the impact of the location of new employment opportunities. The above analysis indicates that, unlike the generally negative impact of new housing on out-commuting trends, other than in Area 4, there is a wider range of relatively sustainable locations for employment development. The in-commuting patterns demonstrate that, other than in Area 5, local industries obtain their workforce primarily from within Selby District, with Area 4, 'Selby and Adjoining Villages' demonstrating particularly sustainable characteristics in this regard. Area 4 is the only one where there is also a slight majority of workers living and working in that same area, not just within the District.

The relative sustainability of the five areas as location for new employment development, from a journey to work perspective may be ranked as follows:

Areas 4	Very sustainable
Area 3	Sustainable
Areas 1&2	Fairly Sustainable
Area 5	Unsustainable

**Information Source**

All figures are taken from tables produced by North Yorkshire County Council for Selby District Council, from 2001 Census Workplace and Migration Data.

Original source table produced by North Yorkshire County Council and above Area Tables produced by Selby District are held electronically in the LDF Library in Excel Workbooks 'Journey to Work In' and 'Journey to Work Out'.

N.B Flows less than 3 people have been rounded up to preserve confidentiality.
