## SELBY PLAN CONSULTATION:-

Q26: No!

A Why? - Granular targets in 2011 AECOM report which are said to be evidence are wrong.

- Targets linked to generating capacity are flawed as they fail to take into account load-factor difference of the various types of renewable energy. You would end up with capacity that generates little power!

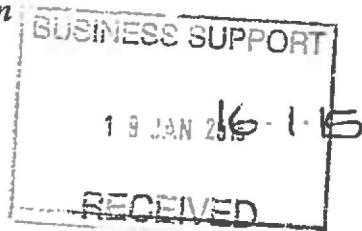

(a) There should not be any designation for areas of wind farm. Any application / (Appeal) should be dealt with on its merits

(b) Setting minimum distances is essential - it should be linked to the size & number of turbines - distances should be set from public areas, homes, roads & wildlife parks (ings etc - birds in flight)

More time is needed to properly weigh up this document.

"Call for sites" - Birkin/001/002 no further development should take place because of services / infrastructure restrictions.

Ross & Joanne  
Pullan

Dear Policy & Strategy Team:

SEUBYPLAN CONSULTATION

I would have liked at least 8 weeks to read, understand & reply - it would have been helpful to have more time. Question 4 - as a community we are not aware of the importance of this document, the whole process is not fit for purpose. The web site says Council PDF must be used - I can't download forms - please accept written observations.

On the attached paper I submit my observations.

Please acknowledge safe receipt when convenient.

Yours faithfully
